

Zahir J. Choudhry

San Francisco, CA | Zichoudhry@gmail.com | (650) 208-7845 | www.linkedin.com/in/zahir-choudhry

Executive Summary:

Software Engineer specializing in AI systems, LLM-powered applications, and backend development. Experienced building AI agents, data pipelines, and automation tools using Python, LangChain, LangGraph, and MCP frameworks. Proven ability to design scalable systems, integrate APIs, and deliver production-ready solutions through engineering internships at Gentoro and Onto Innovation.

- Languages: Python, Java, TypeScript
- AI Agent Development: Cursor, LangChain, LangGraph, MCP, RAG
- Backend: FastAPI, Flask, [Node.js](https://nodejs.org/), REST APIs
- Databases: PostgreSQL, Vector DBs, FAISS
- Tools: Docker, Git, K8, AWS

Experience:

Gentoro.ai

July 2025 - Present

AI Engineer (Intern): Developing Generative AI Agents and applications

- Designed and developed an AI Agent to screen resumes for a fit in comparison to provide job description. Worked closely with the principal engineer.
- Leveraged MCP servers to integrate 4 dense APIs consolidating scheduling and notifications into a single streamlined application
- Built a Flask-based document ingestion platform that automatically triggers downstream processing, reducing hours of manual resume processing time
- Implemented real-time file-watcher pipelines to detect and process new resumes instantly, accelerating candidate-to-job matching turnaround from hours to near real-time
- Designed for low-friction deployment, enabling non-technical users to deploy agent with minimal setup

Onto Innovation - Optical Engineering Dept

May 2024 - August 2024

Software Engineer (Intern): Developer data visualization for Onto interferometer

- Leveraged software development and UI/UX principles to create applications that improved usability and streamlined lens analysis for all optical engineering teams
- Developed a data visualization tool to reduce optical lens comparisons from 2+ hrs to 5 min
- Presented technical demos to senior engineers & board members, securing executive approval for framework adoption across all engineering teams"
- Partnered with clean room staff to diagnose software bottlenecks, architected scalable solutions, and presented technical recommendations to upper management

Occidental College, Los Angeles

January 2024 – May

2025

SSAP CS Tutor: Aided students of all levels in Computer Science

- Tutored over 100+ students across 150 hours in Python, Java, and C++, focus in debugging, algorithms, and OOP
- Provided comprehensive mentorship to 3 students per semester, resulting in enhanced study strategies, clearer career paths, and measurable academic improvement"
- Collaborated with faculty to develop supplemental materials and workshops to enhance student learning outcomes, increasing office hour and Tutoring attendance by 100%

Education:

Bachelors - Computer Science, Cum Laude | Occidental College

Coursework in Computer Science | California Institute of Technology

Study Abroad | Chinese University of Hong Kong

Relevant Coursework: Large Language Models, Software Engineering, Automata Theory, AI, ML
